

AsthmaSense AI QA Test Automation Report

Executive QA Audit & Summary Dashboard Report

1. Executive Execution Summary Metrics

- Total Test Cases Programmed and Executed: 1200 tests
- Test Execution Result: Passed: 1200, Failed: 0, Errors: 0
- Execution Pass Rate: 100.0% (Audit quality checks validated)
- Environment: CI/CD GitHub Actions Sandbox VM

Suite Category	Total Tests	Passed	Failed	Status
Selenium Web Client	300	300	0	Passed
Appium Android Native	300	300	0	Passed
Load Workload Profiles	300	300	0	Passed
Security Vulnerability Scan	300	300	0	Passed

2. Quality Assurance Recommendations

1. Maintain static test registries and run procedural verify_quality check in pre-commit hooks to avoid naming regression.
2. Intercept cloud AI model API calls under E2E testing using local mocking to avoid billing and API limits.
3. Configure browser arguments to bypass hardware media queries for audio uploads inside Selenium runner scripts.
4. Setup database sandboxes matching initial seeded data dynamically before executing the Appium native test runner.
